Abstract

For youth in India, social media is a part of their daily routine. Social media platforms such as Instagram, YouTube, WhatsApp and Facebook have transformed the way young people communicate. During the past decade, the consumption of social media technology has exploded in many countries around the world, and India has been the driving force in the digital revolution in India, with its large youth population. The number of active internet users (those who use the internet at least once a month) is 759 million. The number of people expected to reach 900 million by 2025. The Internet in India Report 2022 states that it is the first time that more than half of the Indians are turning into internet users. Recent data shows a significant increase in social media users in India, emphasizing the need to understand the implications of this digital transformation. The sociological perspective analyzes the effects of digital communication on friendship, family relations, identity formation, social interaction and interpersonal relations. The paper argues that social media is not exclusively positive or negative, but depends on the social context and context of use at the personal level. The study finds that with healthy interpersonal behaviour and digital literacy and awareness, young people can benefit from digital connectivity without any negative impacts on their relationships.

Key words: *Youths, Relationship, Digital, Individual, Sociological.*

Introduction:

Social media has become an integral part of modern Indian youth culture and social interactions, especially. In the context of a rapidly expanding youth population and rapid digital innovations, social media has now become an integral part of the daily life of millions of young Indians. The purpose of this research paper is to delve into the multifaceted nature of the connection between social media and the Indian youth, aiming to explore the diverse impact of digital platforms on their experiences, behaviors, and aspirations. One of the key concerns of this investigation is that social media has an immense influence over the lives of Indian youth. In such a diverse and complex country, social media serves as a digital agora, a space in which young people have to traverse multiple social, cultural and political discourses. Social media is used in every facet of youth life – from connecting with peers and finding information to defining their identity and driving activism – and it's influencing their world views and interactions. Moreover, this study seeks to shed light on the socio-cultural, economic and technological factors associated with adoption and usage patterns of social media among the youth of India. Several factors, including globalization, urbanization, the ubiquity of cheap smartphones and fast internet connections, are combining to give Indian youth a peculiar digital experience. The Youth of India 2022 Report revealed that the population aged 15-29 years made up 27. In 2021, the ratio of 2% is expected to drop to 22% of the population. 7% by 2036. They're at their most happy and adventurous age. In this phase, they are at an age that craves friends most of all so that they are strongly attracted to social media. The social media usage has increased due to COVID-19. There were also behavioral changes such as the amount of time that was required in the lockdown, which was very tiring, monotonous and exhausting. Social media includes social networking sites, social review sites, image or video sharing sites, video hosting sites, community blogs, discussion forums and sharing economy networks.

Social media is the term used for this.This is called social media.

Social networking is a process that uses the internet to allow people to interact with friends, family and acquaintances. Of course, social networking sites allow you to connect with new people, but that's not the only thing they are designed for. Rather, they are more concerned with reaching out to acquaintances, friends and relatives that are already in their lives. Facebook, Twitter, YouTube, WhatsApp, MySpace, and several others are among the most popular social networking sites. They allow us to post photos, videos, and information; meet up with others for events; chat; download music; and even play online games like Scrabble and chess. Cox & Rothmans (2011) defines social media as a combination of the multimedia forms of text, image, video and audio, that allows people to interact with each other and create, share, exchange and discuss information and ideas about themselves and others when they are attached to the Internet. According to Smith. J. It was observed that social media websites are virtual forums for interaction and sharing of information in 2010. Where issues are discussed and defined. Users of social media collaborate to produce content. They are proactive in seeking out information. And value control of social media participation. Turbine. As K. & Heinlein (2010) explain, social media consist of "a set of Internet-based applications that draw on the ideological and technological frameworks of Web 2. 0 and enable the generation and sharing of user-created content," while social networks refer to a representation of relationships between people, and how they are connected, through social ties, from casual acquaintances to close family ties. Social networking is another type of Internet application that can link friends, business partners and others together using several tools.

Meaning of Social Media

Social networking sites are many, and embrace new information and communication technologies like mobile connectivity, photo and video sharing, and blogging. Online community services can be sometimes considered as social network services but the latter are individual-oriented while the first are group-oriented. Social networking sites allow people to post thoughts, pictures, posts, activities, events and interests to their friends. The study of social networks is a truly interdisciplinary academic discipline, and it comes from social psychology, sociology, statistics and graph theory. Georg Simmel was a pioneer of structural theory in sociology. Emphasizing triad dynamics and 'web of group affiliations'. Moreno. J. was responsible for developing the first sociograms in the 1930s to study interpersonal relationships. These methods were then formalized mathematically in the 1950s and theories and methods of social networks had gained popularity in the social and behavioral sciences by the 1980s. The paradigm of social network analysis has become a fundamental one in current sociological research and has been used in many other areas of social and formal sciences. It is a part of a complex network along with other complex networks, which form part of a new science, network science.

Purpose of The Study:

1. To understand the advantages of the social media to the Indian youths.
2. To know the impact of social media on social relationships among Indian youth
3. To find out the drawbacks of the social media's influence on the Indian youth.

Social Connections and Relationships: 2002-2003

Although they facilitate youth connectivity and allow them to engage in collaborative and activist actions, social media also help to produce dynamics of exclusion, cyberbullying and social anxiety. Boyd (2014) stated that social media is a networked public, where youth find opportunities and challenges.

Social and Cultural Engagement

At the same time, social media has become an effective platform for mobilising youth in political campaigns, such as Fridays For future and BlackLives be counted, and can either amplify their voices or serve to spread misinformation and create echo chambers that limit perspectives.

Consumption and influences of culture

However, the constant exposure to hyper-commercialized material raises concerns over consumerism and commodification of children's lifestyle, as younger people are at the forefront of global and local influences coming together to produce a fusion of culture.

Virtual divide and inequality

Although social media presents opportunities, its blessings are not shared equally with youths from marginalized groups who are likely to be blocked from access to era and Internet connectivity (Van Dijk, 2020). This exclusion may exacerbate existing social inequalities.

mental fitness Implications

The relationship among social media and mental health is complex. studies indicates each tremendous and negative impacts. at the same time as structures offer areas for self-expression and support networks, immoderate use has been linked to tension, despair, and disrupted sleep styles conversation benefit

The net is at its best whilst it brings humans collectively. Adults can help kids get the most out of social media by using encouraging them to use online structures to have interaction with others in positive approaches. The number one gain is social connection—whether making new friends or connecting with friends they already know," Nesi said. "On social media, they are able to locate individuals who percentage their identities and pursuits." on-line social interaction can promote healthful socialization amongst teens, in particular after

they're experiencing strain or social isolation. For young people with anxiety or conflict in social interactions, training discussions via social media might be a vital first step in making them feel more comfortable interacting socially with others, either male or female. Social media also can help children stay in contact with their help networks.

Create Creativity

Social media permits college students with a platform to percentage their creativity and their thoughts with a neutral target market and get an honest reaction. The reaction becomes a manual for them to higher shape their skills if they're looking to pursue that skill professionally.

Profession Opportunities

It's crucial for college kids to dominate their on-line presence. When used effectively, social media can become an extension of your student's resume and is a great way to teach your child to build a positive online reputation, showcase their personality and take control of the results of their searches.

For college students, social media is a wonderful opportunity to build a solid presence of their specific niche of study and create great content on social media networks, so now's the time to get started. In trendy job marketplace, employers are searching at private profiles, and the pleasant manner to trap their attention is to make your expert profiles a wonderful exhibition of your man or woman and professionalism.

Social media can be a catalyst for motivating college students to consider they are able to accomplish excellent things. Media is a tool that has a strong influence on values and ideals, in which content is delivered to the students in a positive and motivating atmosphere teaches them how to express gratitude, be kind, act appreciative and think about their own capabilities during their college years.

Social media utilized to improve conversations among circle of relatives participants, particularly of their teenage years, as kids come to be increasingly closed off and secretive of their on line sports increasingly every 12 months. Youth use social media to easily communicate with family members—even those they see daily—and share pictures or videos with them, and stay in contact through social media the way they feel comfortable communicating with family members.

The negative effects of social media.The drawbacks of social media.

Spending too much time on social media is one purpose for challenge. dangerous content is some other. regardless of efforts through caregivers and tech businesses to defend youngsters from elaborate cloth, they nonetheless stumble upon lots of it on-line—inclusive of mis- and disinformation, racism and hate speech, and content material that promotes risky behaviors which include disordered consuming and self-harm.

Cyberbullying: Almost half of all young people experience cyber harassment, cyber aggressive comments and cyber shaming, making them more likely to suffer from psychological distress.

Sleep Disruption: late night scrolling delays sleep, interferes with deep sleep and impacts the sleep needs of developing brains.

Less real-world interaction: digital communication has taken the place of in-person communication, limiting important social skill development and creating social isolation.

Excessive screen time and poor overall performance: too much screen time is taking the place of homework, physical activity, and family time, resulting in poor grades and lack of activity.

Conclusion:

Social media has become a big burden in the changing social relationship between Indian adolescents. The traditional boundary among on-line and offline social existence is becoming an increasing number of blurred. Social media presents tremendous opportunities for communication, education, social participation and self-expression. but, excessive use may additionally create challenges for interpersonal relationships, privateness, social contrast and circle of relatives interplay. From a sociological perspective, the imperative problem is therefore now not whether or not social media is good or bad. In all likelihood, children's social interactions in the future in India will be a combination of 'digital' and 'offline' interactions – while digital play is expected to offer benefits for children, 'accountable' digital behaviour, media literacy and robust offline social interactions can help children reap the benefits of technological connectivity without compromising on the value of meaningful human interactions.

Acknowledgement

The author expresses sincere gratitude to all those who contributed directly and indirectly to the completion of this research paper on **"Role of Social Media on Indian Youths: A Bird Eye View."** The author is especially thankful to the **Government First Grade College, Kamalapur, Dist. Kalaburagi**, for providing the necessary academic support and a conducive environment for undertaking this study.

The author gratefully acknowledges the valuable scholarly works and references that provided important insights into social media, youth culture, digital communication, social relationships, creativity, media literacy, and the positive and negative effects of social media on young people.

The author also sincerely thanks colleagues, students, friends, and well-wishers for their valuable suggestions, encouragement, and cooperation during the preparation of this research work.
